

VIRTUAL INTRODUCTION TO SPUNBOND
& MELTBLOWN TECHNOLOGIES

An in-depth, virtual learning experience for nonwovens professionals

This intensive 2-day course provides a comprehensive understanding of spunbond and meltblown processes including raw material selection, basic science knowledge, testing, and the characterization used to create end use products. Attendees will gain insight into the nonwoven fabrics industry with market forecasts and will learn the significant role these engineered materials play in the industry.

INDA/NWI Members: \$1,395
Non-members: \$1,995

WHEN
Wednesday, March 24, 2021
Wednesday, March 31, 2021

Multiple registrants from the same company receive a discount.

A HIGH-LEVEL REVIEW OF RAW MATERIAL SELECTION,
TESTING, AND THE CHARACTERIZATION USED TO
CREATE END USE PRODUCTS.

TOPICS COVERED INCLUDE:

- Polymer properties and fiber formation, including bi-component fibers
- Polymers used in spunbond and meltblown fabrics
- Processes and products
- Composites and laminates
- Converting techniques
- Tests and evaluations

THIS COURSE IS DESIGNED FOR

professionals in the nonwovens business who are seeking advanced knowledge of the spunbond and meltblown processes including those involved with:

- R&D
- Manufacturing
- Product development
- Production
- Maintenance and plant engineering
- Technical sales and marketing
- Process engineering
- Quality control
