

INTERMEDIATE NONWOVENS TRAINING COURSE

Dive deeper into the world of nonwovens

Designed for industry professionals with nonwovens experience or a technical background, this 3.5 day course is a bridge between INDA's Elementary Nonwovens Training Course and the Advanced Courses of the Professional Development Series. Attendees will learn how to select the correct technology to meet product performance and attribute requirements. The course includes the fundamental chemical and physical make up of nonwovens, the properties of materials used in making them, and the manufacturing processes used to produce them.

The curriculum includes demonstrations of processes at The Nonwovens Institute on the campus of NC State University, at their state-of-the-art pilot lines and analytical characterization labs. Both INDA and NWI instructors will lead the class, with select guest speakers contributing to educational content. A Bachelor of Science degree in engineering, textiles, or five years of relevant experience in nonwovens is recommended. This educational course is aimed at making professionals and their organizations more successful by providing:

- Advanced nonwovens knowledge
In-depth understanding of processes, technologies, chemistries, and raw materials
Expanded business options for branded and private label products
Enhanced professional and personal growth

INDA offers on-site personalized training for INDA Member companies. Classes are developed to your company requirements. For full details, contact INDA Director of Education & Technical Affairs, Chris Plotz, cplotz@inda.org.

\*The intermediate training course is offered two times annually.

OVERVIEW

- Fundamentals of fibers and materials
Web formation technologies
Fabric bonding technologies
Fabric finishing and converting
Testing and characterization
Nonwoven products and markets
Future direction of the industry and technologies

THIS COURSE IS DESIGNED FOR nonwovens industry professionals who desire a deeper knowledge and understanding of nonwoven processes and products including:

- R&D professionals
Manufacturing and engineering
Business and product development
Production personnel
Maintenance and plant engineers
Quality control technicians
Technical marketing and sales professionals
