## About NAFA Air Filtration Best Practice Guidelines:

What's the difference between ASHRAE has Standard 52.2 and NAFA's Best Practices and Guidelines?

The American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE) has minimum standards for air filtration. Organizations like the National Air Filtration Association (NAFA) go beyond these minimum standards. NAFA publishes best practices and guidelines for several facility applications based on the experience and expertise of their membership, as well as current mandates and research provided by governmental and scientific communities. HVAC and fir filtration professionals should use NAFA's Best Practices and Guidelines as a tool to educate their clients on how to protect their facilities' occupants.

## Branded Best Practice Guidelines (Members Only)

All guidelines are being updated with the newest information, this program is closed until June 2023. Add your organization's logo to any of our 14 Best Practice Guidelines to distribute to your employees and clients. This is a great way to show that your company is involved in the industry and follows the latest best practices of air filtration.
